SUMMARY

Full-Stack Developer with 6+ years of experience building scalable web applications, AI-powered solutions, and high performance systems using JavaScript, TypeScript, React, Angular, Vue, Python, and Node.js. Experienced in REST API development, data processing, validation, and integration, with a proven track record of driving business impact through application architecture, workflow automation, performance optimization, and cross-functional technical leadership.

PROFESSIONAL EXPERIENCE

Royal Bank of Canada (Borealis) — Senior Front-End Developer

Jul 2025 – Oct 2026

- Built Underwrite Assist, Canada's first AI-powered commercial credit underwriting assistant, a full-stack platform using Angular, Python, FastAPI, and Pydantic to streamline small business lending assessments. Designed and implemented an orchestration layer of 6 specialized AI agents to automate meeting notes, document collection, and underwriting workflows, reducing manual note-taking by 50%, cutting document collection timelines from 4 weeks to 2, and saving advisors 15 hours per week.
- Architected relational database schemas and implemented high-performance backend API endpoints to deliver clean, optimized data payloads to the Angular frontend.
- Developed backend services and asynchronous job processing using PgQueuer to handle document uploads, AI-processing, and report generation. Added retry mechanisms, failure recovery, and structured logging to make background processes more reliable.
- Implemented user authentication and access control to secure platform access and protect sensitive client information.
- Represented the engineering team at internal company events, presenting live interactive demos to showcase Underwrite Assist's AI workflows and technical features, driving platform awareness across business units.
- Deployed applications across development, UAT, and production environments using Docker, Kubernetes, GitHub Actions, and Red Hat OpenShift.
- Mentored co-op students and new team members, helping them navigate the codebase, troubleshoot issues, and implement features across multiple projects.

Royal Bank of Canada (Wealth Management) — Senior Front-End Developer

Dec 2024 – Jul 2025

- Built a full-stack, AI-powered meeting intelligence platform using React, TypeScript, Node.js, and Express, automating meeting transcription, summarization, action item extraction, and direct Jira API ticket creation on behalf of users.
- Developed a self-service wealth management platform using Vue.js, Pinia, Python, FastAPI, Pydantic, and SQLAlchemy with user authentication and role based access control, architected for integration into a Salesforce tab widget and replacing quarterly spreadsheet based reporting with real-time client insights and prioritized business opportunities.

Leon's Furniture Limited Group — Web Developer

May 2022 – Nov 2024

- Built 91 pages and optimized sales checkout flows using React and Shopify, boosting site traffic by 30%.
- Led a team of 3 developers, balancing project management with hands-on development to create a custom CRM that made internal sales workflows more efficient.
- Managed stakeholder requirements and trained thousands of employees on internal web tools.

TK Events — Web Developer

Jan 2021 – Apr 2022

- Developed enterprise front-end applications using JavaScript, CSS, and HTML for clients including Dell and BMO, integrating gamification features that boosted engagement by 18%.
- Delivered 25+ online virtual events annually, driving $2,000,000 in yearly revenue through robust, thoroughly tested web applications.

Essnce — Web Developer (Contract)

Jul 2020 – Nov 2020

- Built Essnce's e-commerce platform from scratch using JavaScript, Shopify, Liquid, and CSS to establish revenue streams and increase mobile sales by 32%.
- Refactored legacy codebases and optimized feature performance to increase overall site speed by 45%.

EDUCATION

General Assembly — Software Engineering Immersive 2019 - 2020

Wilfrid Laurier University — Studies in Computer Science 2012 - 2015

SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frontend: React, Angular, Vue.js, Redux, NgRx, Pinia

Backend: Node.js, Express.js, FastAPI, SQLAlchemy, Pydantic

Databases: PostgreSQL, MongoDB

DevOps & CI/CD: Docker, GitHub Actions, Kubernetes, OpenShift

AI & Automation: LLM integrations, Agents and workflows
